

Video industry technology has radically changed over the past few years, introducing even lighter and more compact cameras. The latest cameras have created a new way to film, often one person is able to do the job on his own while a few years ago a full crew was required.

The video industry is crossing over to a new dimension!

Manfrotto, market leader in the light videocamera and photographic supports, is launching new video systems developed specifically for the latest camcorders, the new generation DSLR-V and matching video accessories. The ergonomic and technical characteristics make the 504HD systems the perfect support for the "new" video industry.

"Cross over to the new dimension of film making."

NEW 504HD SYSTEMS

Manfrotto is proud to introduce the 504HD SYSTEMS, an invitation to "Cross Over" to the new dimension of film making.

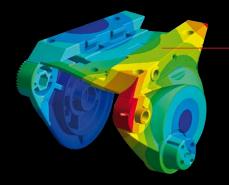

The 504HD is the result of an important technical evolution - the perfect synthesis between an innovative "bridge architecture" and Manfrotto's cutting edge engineering: Bridging Technology - an exclusive Manfrotto patent. A new bridge leading the videographer and photographer to even better results with today's high-definition cameras.

UNIQUE FEATURES, FOR UNIQUE FOOTAGE

- PAN fluid drag system for a more ergonomic operation
- Easy Link Connectors for a more flexible accessory attachment
- Wider top plate and longer sliding plate for extra stability and balance while using video or photo equipment
- An even more rigid structure for maximum precision and improved responsiveness
- 4-step counterbalance system ensures quick set-up and optimal performance
- Ball-bearing drag system for precise, smooth movements
- Lightweight modern materials for optimum balance of strength and size

High rigidity structure

VARIABLE FRICTION

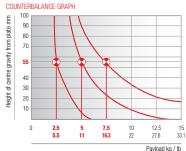

Alot of development attention has gone in to our new variable friction (FDS) components in order to guarantee outstanding fluidity of movement around both TILT and PAN axes.

Each control has a degree scale to allow precise adjustment of the fluidity of every movement of the 504HD, so it can be fine tuned to your camera equipment, to the type of shot required and to the operating temperature (from -20° C to $+60^{\circ}$ C).

IMPROVED COUNTERBALANCE

The 504HD's CounterBalance System is an evolutionary step above our older versions, and can now balance loads up to 7.5kg (16.5lb). The 504HD's CBS has four step settings:

STEP 0: Off

STEP 1: min (2.5kg – 5.5lb)

STEP 2: mid (5kg – 11lb)

STEP 3: max (7.5kg - 16.5lb)

KEY FEATURES

Easy-Link Connectors

Two 3/8" EASY-LINK
CONNECTORS are located
on the top plate to allow
accessories, such as monitors
or lights, to be easily and
securely attached. This new
feature means the camera hot
shoe can be used for other
accessories, or kept free to
reduce weight and lower
the center of gravity for
improved stability.

Safety Pin

Your equipment is always secure: even if you forget to block the sliding plate, the secondary safety pin prevents the plate (and your camera) from falling.

Brakes

Independent brakes on TILT and PAN axes. The 504HD's new disc brakes are inspired by automotive design, and are more than capable of keeping the heavy equipment safe, stable and in position.

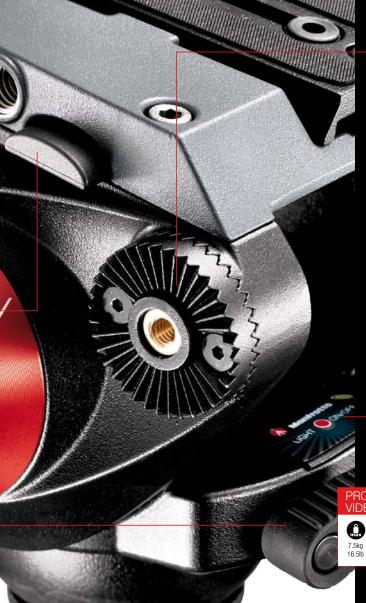

Numinium

Pan Bar Attachment

The pan bar attachments on both left and right sides of the head give maximum flexibility. Both attachments have a substitutable rosette wheel, which can be replaced easily and cheaply if it suffers wear or damage... preferable by far to having to substitute the whole side wall of the head.

Head Leveling
The back-lit bubble spirit level lets you level the head even in low light conditions.

15.5cm

TWIN LEG SYSTEMS

The priority of our new systems is to provide a complete package for video support. Our new 546 twin-leg tripod is an ideal combination for the 504HD HEAD and is available in two versions: with a mid-level spreader (code 504HD, 546BK) or with a ground-level spreader (code 504HD, 546GBK).

LEVELING SYSTEM

The head leveling system is built around a 75mm bowl which guarantees perfect stability at any angle.

LEG LOCK LEVERS

Our new leg lock levers have been designed to improve ergonomics and speed up deployment and adjustment. Optimum performance for tripod payloads up to 20kg.

LOCKING COLLAR POWER ADJUSTMENT

Another detail of the care that goes in to ensuring your Manfrotto tripod will outlast the competition: the screws behind all the collars on each leg, allow you to adjust the overall locking power throughout the tripod's life, so even after years of heavy use, it can be as sturdy and reliable as the day you got it.

> TELESCOPIC SPREADER

Important improvements have been made to the mid-level spreader, which is now re-engineered and more robust, to guarantee a flexible link between spreader and tripod leg.

GRIP

Perfect grip on any terrain thanks to the spiked feet with removable rubber shoes.

SINGLE CARBON LEG SYSTEMS

Simple words for an exceptionally flexible Manfrotto system. The combination of the 504HD with a single-leg carbon fiber tripod offers the ultimate in lightweight support, with a resistance to torsion that even outperforms twin-leg aluminum tripods. Not forgetting the incredible min-max height range this design allows: from 40cm (15.7in) to 217.5cm (85.6in)... all from a single system.

Ideal for new DSLR-Video cameras.
