

TEC PRO

SteadyBoy / SteadyBaby

Not a totally new concept.
Many years ago we used sandbags.

New the design and material- both offer advantages in day to day use. SteadyBoy and Steady Baby are double wall bags from water resistant material filled with thousands of polypropylene pellets.

If you don't want to carry a suitable tripod and still need super steady images, even in locations where you could not use a tripod this is the ideal tool.

SteadyBoy

Weight: ca. 3,0 kg / 6.6 lbs
For professional video and film cameras
The padded carrying strap offers carrying comfort.

Shooting on rocks, the roof of a car, the railing of a ship, a rooftop...

Sharp shooters use similar concepts/the same technology.

Shooting a documentary with a small team in rough terrain, even when a long lens is needed, and especially when it is a little windy, when a lightweight tripod would become useless.

Every experienced documentary shooter can add dozens more examples.

SteadyBaby

Weight: ca. 1,5 kg / 3.3 lbs
For small camcorders and still cameras, even with zoom lenses up to 300 mm
The padded carrying strap offers carrying comfort.
