Web RCS

The Web RCS offers a user-friendly graphic interface. With dynamic snapshots of the connected sources available in the interface, the intuitive dashboard allows operators to fully adjust their displays and control them live during their events.

- Simultaneous source conversion to 3 independent outputs
- Extraction of different parts to produce creative displays

* The VIO 4K can only process one input at a time, and therefore even when equipped with additional expansion interfaces, the device can only output three independent scaling of the same source, and cannot output three different sources.
